Global Track, one of the world’s largest manufacturers of premium rubber tracks and track pads, is committed to manufacturing the highest quality agricultural, asphalt paver, and construction tracks and track pads. We use only premium natural rubber materials, the strongest anti-corrosive continuous wound belted steel cable system, and computer controlled state-of-the-art molding processes.

Global Track manufactures OEM rubber tracks for a number of major machine manufacturers. Global Track manufactures rubber tracks for asphalt pavers, agricultural machines, excavators, tracked skid steer loaders & ASV/CAT style posi-trac loader machines, mid rollers for AG tractors and 3 styles of rubber track pads for steel tracked machines.

Global Track has over 12 factory direct outlets worldwide including five locations in the USA.

Reinforced Rubber Mid Rollers

* ‘STEEL GUARD’ 5 layer Steel Cable System with 6.5mm high strength main cables exceeds OEM requirements, decreases carcass stretching/distortion/punctures & increases cut/tear resistance

* One-step vulcanization of the carcass, tread bars, and drive lugs results in increased adhesion strength & less cutting/tearing off of tread bars and drive lugs

* Premium rubber compounds developed with high anti-cutting/anti-tearing resistance for the tread bars and decreased inside wear by the mid rollers, idlers and drive wheels

---

**Steel Guard**

Heavy Duty 5 Layer Cable System

*Strongest Steel Cable System*

*Reduces Punctures*

*Reduces Abrasions*

*Reduces Carcass Distortion*

---

**Reinforced Rubber Mid-Rollers**

Developed for Extended Wear Life

---

**MAIN CABLE**

6.5mm high-tensile strength main cables exceed the requirements of modern high power agricultural machinery and greatly increases tear resistance.

---

**ONE-STEP VULCANIZATION**

Jointless technology and one-step vulcanization of the tread bars, drive lugs and track cushion results in increased adhesion strength and less tearing off of the tread bars and drive lugs.

---

**RUBBER COMPOUNDS**

Premium rubber compounds and specially designed tread bars offer increased traction, cleanout and track wear life, while decreasing track cutting, ground disturbance and vibration.
